Introducing a new level of quality data management: the MITUTOYO MeasurLink 8 software

The ground-breaking, versatile MITUTOYO quality data management software MeasurLink enters the market in a new generation. The new integrated solution features, amongst others, the practical Gauge Management system that comprises sophisticated functions like reports, calculations as well as inventory and calibration management functions.

Neuss, March 2016. The Mitutoyo MeasurLink software family is well-renowned around all branches for its real-time data collecting capability from Digimatic measuring instruments and its data analysis and network monitoring components. Combined with a multi-user relational database, MeasurLink 8 delivers a safe and organized data warehousing system making quality data available for viewing and analysis by any member of production, engineering and managerial staff throughout the company.

The new generation of MeasurLink constitutes a consistent further development of its predecessor. It boasts vastly refined tried and tested applications as well as an abundance of new features and functions. The latest development is the new component Gage Management 8.0 – a feature that takes care of the administration of the connected measuring instruments and comprises extremely practical features like a gage inventory management. The gage calibration recall system automatically indicates when a certain instrument is due for calibration. Gage Management 8.0 also describes the calibration procedure, the gage's vendor as well as its location in the plant.

A reporting feature of MeasurLink 8 constantly tracks the development of measuring values and informs the users whenever the acquired data approaches a tolerance limit. Thus, the user can take counteraction before the manufactured workpieces drop out of tolerance bounds. The program additionally excels in providing the user with calculated measuring values derived from pre-defined formulas or specified presettings.

Like its predecessor, MeasurLink 8 is available from mid-2015 in several modules offering a wide range of solutions from data acquisition to manager observation as well as gage management. The customer can create his own bundle of software components and licence packages that suit his requirements. The software comes with Microsoft SQL Server Express Edition 2014 as a standard and supports the Microsoft SQL Server versions 2014, 2012 and 2008. MeasurLink 8 is compatible with all Windows 7 and Windows 8 versions in the 32-bit and 64-bit releases.
